

STRUCTURAL REQUIREMENTS

STRUCTURAL REQUIREMENTS

The installation of a Hy-Line Shower Door is made easier with level wall and curb (threshold) surfaces. It is recommended that double 2x4 framing be installed where the shower door will be located. This framing is mandatory for HL10 & TEN series doors, especially for wall mounted hinges. See Figure #3a. Framing is also required for HL10 series wall braces. See Figure #3b.

Note that TEN series hinge doors can not be installed on fabricated bath or shower enclosures.
